

Project Initialization and Planning Phase

Date	15 September 2026
Team ID	SWTID-2026-7879
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

ServiceNow administrators need a flexible way to restrict access to individual records based on specific field values. Traditional role-based access control may allow a user to access all records within a table even when some records contain sensitive information. A Script-Controlled ACL can dynamically evaluate the field value and allow or deny access accordingly.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow application administrator	Restrict users from accessing specific records	Standard role-based ACLs alone may not provide field-level record conditions	Different records may require different access based on their field values.	Concerned about unauthorized access to sensitive records
