

Solution Requirements

Date	15 September 2026
Team ID	SWTID-2026-7879
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	Users must be authenticated before accessing ServiceNow records.	High
2	Authorization	The ACL must determine whether a user can access a record.	High
3	Field Validation	The script must check the specified field value before granting access.	High
4	Access Decision	The ACL must return an allow or deny decision based on the condition.	High
5	Role Validation	Authorized roles such as administrators can be given unrestricted access when required.	Medium
6	Record Protection	Restricted records must not be accessible to unauthorized users.	High
7	Testing	The ACL must be tested with users having different roles and access conditions.	High
8	Error Handling	Invalid or missing field values must be handled safely.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance	ACL evaluation should execute quickly.	Response within 2 seconds
2	Scalability	ACL should work as the number of records increases.	No significant performance degradation
3	Security	Unauthorized users must not access restricted records.	100% access-rule enforcement
4	Reliability	ACL should consistently return the correct decision.	No critical ACL errors
5	Maintainability	Script should be simple and well documented.	Easy to modify
6	Usability	Administrators should be able to understand the access rule.	Clear configuration and comments
