

Performance Testing

Date	15 September 2026
Team ID	SWTID-2026-7879
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool	ServiceNow built-in testing / manual testing
Type of Testing	Functional and Performance Testing
Target Module	Script-Controlled ACL
Test Environment	ServiceNow Development Instance
Test Date	Add actual date

Step 2: Test Scenarios

S.No	Test Scenario	Users	Duration	Expected Outcome
1	Admin accesses restricted record	1	10 sec	Access allowed
2	Normal user accesses public record	1	10 sec	Access allowed
3	Normal user accesses restricted record	1	10 sec	Access denied
4	User accesses record with invalid/missing field value	1	10 sec	Access denied safely

Step 3: Performance Test Results

S.No	Metric	Target	Actual	Status
1	Average Response Time	< 2 sec	Record actual result	Pass/Fail
2	Maximum Response Time	< 5 sec	Record actual result	Pass/Fail
3	Throughput	Stable	Record actual result	Pass/Fail
4	Error Rate	< 1%	Record actual result	Pass/Fail
5	CPU Utilization	< 80%	Record actual result	Pass/Fail
6	Memory Utilization	< 80%	Record actual result	Pass/Fail

Step 4: Observations & Analysis

The scripted ACL adds a small access-validation step before a record is returned to the user. The script uses simple field and role checks, helping keep the access-control logic lightweight and maintainable.
